### PROFILE

Strong orientation towards backend development with a focus on efficient problem-solving. Recognized for analytical thinking, quick adaptability to new environments, and ability to collaborate effectively within development teams. Skilled in clear and effective communication to convey technical ideas understandably.

Eager to continue strengthening expertise in technologies such as Java and Spring Boot while gaining hands-on experience in real-world projects. Commitment, proactivity, and dedication drive me to consistently add value and exceed goals.

### PROFESSIONAL EXPERIENCE

Globant – Backend Java + IA developer

18/08/2025 – 30/09/2025

- Selected among the top 5 students from the Backend with Java program at Globant.
- Temporarily hired to develop a system using Java backend and AI solutions provided by the company.
- Completed multiple training sessions on Artificial Intelligence and its integration into applications.

The goal was to test students recently graduated from Globant's scholarship for them to develop a relatively simple system but with some technologies unknown for us and check if

we can resolve it. For this we use what we learned in scholarship plus different AI tools (most of them developed by Globant).

This was an individual job and I could successfully finish it

#### NoCountry – Work simulation | Backend and database developer

07/2024 – 08/2024

- Designed and developed the backend of a web application in a collaborative environment using Node.js, Express and relational databases.
- Implemented REST APIs for communication between frontend and database.
- Gained experience in teamwork and solving issues under tight deadlines.

In this experience, I would like to highlight that I was a recently graduated student in where I mostly programmed with JavaScript and React. That's why I registered in this simulation as a Frontend developer. At the beginning there were 11 of us, but quickly, in the first days, we were just 3. My 2 partners had also signed up as frontends, for what we have no backends developers in our group.

One of the rules in this simulation was "Resolve problems, adapt yourself", that's why I didn't hesitate and took the backend position and in spite of I wasn't very familiar with the topic, I made it. Tutorials and web pages helped me a lot.

#### Compañía Argentina de Entretenimientos SRL | Branch supervisor

2013 – 2021

- Led a team across 16 branches in Argentina, managing recruitment, training, and staff development.
- Coordinated logistics, supervised maintenance of gaming machines and optimized operational processes.
- Developed and implemented internal improvements, increasing efficiency across multiple areas.

DBA: Buba park, electronic games company for children.

I started in this company as a cashier when it has only one branch then I was promoted to branch manager. Year by year, the company was getting bigger and bigger and I gradually added different positions: Human resources, branches supervision, opening and (in case of necessary) closing of them, etc.

I managed to implement different controls, procedures and other improvements to each branch as they either didn't have them or didn't have unified processes for all of them. In this way, my goal was that the game experience was the same in each branch or with little differences depending on the customers. From gameplay in every machine, prizes, costs, customer service methodology, etc.

## EDUCATION

Backend with Java – Globant (09/2024 – 04/2025): completed

Higher technician in computing with administrative orientation – Escuela superior de Comercio, Universidad Nacional del Sur (2022 – 2024): completed

## ADDITIONAL COURSES AND TRAINING

Introduction to AWS – IT College · *Completed*

Prompt Engineering – IT College · *Completed*

## TECHNICAL SKILLS

- Backend: Java, Spring Boot, Node.js, Express, C#
- Databases: MySQL, SQL
- Frontend: JavaScript, React, HTML, CSS
- Cloud and tools: AWS (basic), Git
- Languages: Spanish (Native), English B2 (Upper-Intermediate)

References and academic certificates available upon request.
